

COPPER FITTINGS FOR HVACR APPLICATIONS

Job Name	Contractor
Job Location	Wholesaler
Engineer	Streamline[®] Rep

Product Description:

Streamline[®] Wrot Copper fittings for use in refrigeration applications. Available sizes ranging from 1/8" to 8-1/8" in outside diameter. Product is designed to join ASTM B280 and ASTM B88 seamless copper tube.

Material:

Streamline[®] Wrot Copper fittings shall be made from material in compliance with UNS C12200 grade of copper.

Key Specifications:

Streamline[®] Wrot Copper pressure fittings shall conform to ASME B16.22 and MSS SPI04. Streamline[®] Wrot Copper pressure fittings are third party verified in select sizes¹ through Underwriters Laboratories (UL) for operating pressure of 700psi at 250°F.

Installation:

Installations shall comply with the latest applicable building codes for the local jurisdiction. For detailed installation instructions, consult the Copper Development Association at copper.org.

Brazing Alloys (melting at or above 1000°F)	Pressure-temperature ratings is that of the tubing being used				

Note: Ratings are those given in ASME B 16.22 "Wrought Copper and Copper Alloy Solder Joint Pressure Fittings." (a) Solder alloys are covered by ASTM Standard Specification B32. The Safe Drinking Water Act Amendment of 1986 prohibits the use of any solder having a lead content in excess of 0.2% for potable water systems.

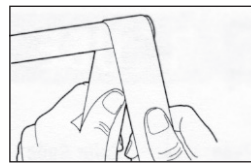

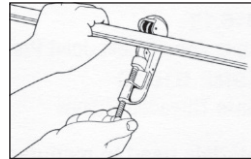

We believe HVACR connections should be made by brazing (using filler metals that melt above 800° F), which is primarily because solder alloys may not be suitable to high vibration and aggressive thermal-cycling environments.

PRESSURE LOSS IN FITTINGS EXPRESSED AS EQUIVALENT LENGTH OF TUBE, FEET

COPPER TUBE AND SOLDER/BRAZE TYPE FITTINGS

1. Cut tube square with the cutter and remove burrs
2. Clean outside end of copper tube thoroughly with sand cloth or sandpaper equal depth of fitting. Leave no dark spots.
3. Clean inside of fitting carefully to tube stop with wire brush. Note: Sand cloth or sandpaper may also be used.
4. Using a brush, apply light uniform coat of flux to the outside of the tube and inside of the fitting.
5. Slip tube into fitting to tube stop. Turn tube back and forth once or twice to distribute flux evenly.
6. Apply heat uniformly around the fitting with torch. When filler metal melts upon contact with heated fitting, the proper brazing temperature has been reached. Remove flame and feed filler metal slightly off center at the bottom of the joint. Proceed across the bottom of the fitting and up to the top center position. Return to the starting point, and then proceed up the incomplete side to the top, again, overlapping the filler metal. Wipe off surplus with a piece of cloth.

CAUTION: No not overheat the joint or direct the flame into the face of the fitting cup. Overheating could burn the flux, which will destroy its effectiveness and the filler metal will not enter the joint properly.

1. Cut tube to length & remove burrs.
2. Clean outside of tube with sandpaper or sand cloth.
3. Clean inside of fitting with wire brush, sand cloth or sandpaper.
4. Apply flux thoroughly to inside of fitting.
5. Apply flux thoroughly to outside of tube - assemble tube and fitting.
6. Apply heat with torch. When filler metal melts upon contact with heated fitting, the proper temp for brazing has been reached. Remove flame & feed filler metal to the joint at one or two points until a ring of filler metal appears at the end of the fitting.
